

**Bridgewater Bank  
Regulatory Disclosures  
June 30, 2016**

This document was prepared to fulfill regulatory requirements of the Office of the Superintendent of Financial Institutions Canada. Public disclosure requirements under Basel II Pillar 3, Basel III Pillar 3, OSFI Guideline B-20 and other OSFI guidance are provided. All figures unless stated otherwise are in thousands of dollars.

The information contained in this document has not been audited.

## Corporate Profile

Bridgewater Bank (the Bank), a federally regulated institution, is supervised by the Office of the Superintendent of Financial Institutions Canada (OSFI). The Bank is owned by the Alberta Motor Association.

The Bank specializes in residential mortgages and deposit products through a select network of brokers. The Bank serves customers across Canada, with the exception of Quebec. It does not offer Home Equity Lines of Credit (HELOC) loans nor does it operate or offer products or services in foreign jurisdictions.

## Capital Shares

### **Common shares**

Common shares have voting rights. They are considered Common Equity Tier 1 capital for OSFI requirements.

### **Subordinated debt**

The Bank has issued subordinated notes which are unsecured and subordinated to all other indebtedness of the Bank. The loan bears interest at 10% and matures July 2023. The subordinated debt automatically converts into common shares if OSFI deems common shares are needed to restore the Bank's viability or if a Canadian government injects capital into the Bank because it is deemed non-viable without the capital injection. The subordinated debt is considered Tier 2 non-viability contingent capital (NVCC) for OSFI requirements.

## Capital Management

The Bank manages its capital under guidelines established by OSFI. The regulatory capital guidelines measure capital in relation to credit, market and operational risks. The Bank qualifies to use the standardized approach for the measurement of credit risk and the basic indicator approach for the measurement of operational risk.

The Bank has three main objectives. They are 1) to ensure there is sufficient capital in order to meet regulatory restrictions on its leverage ratio; 2) to allow for asset accumulation to manage cash flow commitments under normal operating environments; and 3) to develop and introduce new products and expand current offerings. The Bank has various capital policies, procedures and controls which it utilizes to achieve these objectives.

The Bank fully applies the Basel III deductions to calculate the all-in target ratios as per OSFI's Capital Adequacy Guidelines. The following details the Bank's capital position under Basel III capital requirements as of June 30, 2016:

<b>Modified Capital Disclosure Template</b>		<b>All-in</b>	<b>Transitional</b>
<b>Common Equity Tier 1 capital: instruments and reserves</b>			
1	Directly issued qualifying common share capital (and equivalent for non-joint stock companies) plus related stock surplus	108,000	
2	Retained earnings	(31,390)	
6	<b>Common Equity Tier 1 capital before regulatory adjustments</b>	<b>76,610</b>	
<b>Common Equity Tier 1 capital: regulatory adjustments</b>			
28	Total regulatory adjustments to Common Equity Tier 1	(11,646)	
29	<b>Common Equity Tier 1 capital (CET1)</b>	<b>64,964</b>	<b>69,622</b>
<b>Additional Tier 1 capital: instruments</b>			
30	Directly issued qualifying Additional Tier 1 instruments plus related stock surplus	-	
36	<b>Additional Tier 1 capital before regulatory adjustments</b>	<b>-</b>	
<b>Additional Tier 1 capital: regulatory adjustments</b>			
43	<b>Total regulatory adjustments to Additional Tier 1</b>	<b>-</b>	
44	<b>Additional Tier 1 capital (AT1)</b>	<b>-</b>	
45	<b>Tier 1 capital (T1 = CET1 + AT1)</b>	<b>64,964</b>	<b>69,622</b>
<b>Tier 2 capital: instruments and provisions</b>			
46	Directly issued qualifying Tier 2 instruments plus related stock surplus	30,000	
51	<b>Tier 2 capital before regulatory adjustments</b>	<b>30,000</b>	
<b>Tier 2 capital: regulatory adjustments</b>			
57	<b>Total regulatory adjustments to Tier 2 capital</b>	<b>-</b>	
58	<b>Tier 2 capital (T2)</b>	<b>30,000</b>	
59	<b>Total capital (TC = T1 + T2)</b>	<b>94,964</b>	<b>99,622</b>
60	<b>Total risk-weighted assets</b>	<b>196,173</b>	<b>200,831</b>
<b>Capital ratios</b>			
61	Common Equity Tier 1 (as a percentage of risk-weighted assets)	33.12%	34.67%
62	Tier 1 (as a percentage of risk-weighted assets)	33.12%	34.67%
63	Total capital (as a percentage of risk-weighted assets)	48.41%	49.61%
<b>OSFI all-in target</b>			
69	Common Equity Tier 1 capital all-in target ratio	7.00%	
70	Tier 1 capital all-in target ratio	8.50%	
71	Total capital all-in target ratio	10.50%	

The Bank fully applies the Basel III deductions to calculate the leverage ratio as per OSFI's Leverage Requirements Guideline. The following details the Bank's leverage ratio position under Basel III leverage requirements as of June 30, 2016:

Item		Leverage Ratio Framework
<b>On-balance sheet exposures</b>		
1	On-balance sheet items (excluding derivatives, SFTs and grandfathered securitization exposures but including collateral)	1,269,857
2	(Asset amounts deducted in determining Basel III "all-in" Tier 1 capital)	(11,646)
3	<b>Total on-balance sheet exposures</b> (excluding derivatives and SFTs) (sum of lines 1 and 2)	<b>1,258,211</b>
<b>Derivative exposures</b>		
4	Replacement cost associated with all derivative transactions (i.e. net of eligible cash variation margin)	529
5	Add-on amounts for PFE associated with all derivative transactions	-
11	<b>Total derivative exposures</b> (sum of lines 4 to 10)	<b>529</b>
<b>Securities financing transaction (SFTs) exposures</b>		
16	<b>Total SFTs exposures</b> (sum of lines 12 to 15)	-
<b>Other off-balance sheet exposures</b>		
17	Off-balance sheet exposure at gross notional amount	9,322
18	(Adjustments for conversion to credit equivalent amounts)	(7,442)
19	<b>Off-balance sheet items</b> (sum of lines 17 and 18)	<b>1,880</b>
<b>Capital and Total Exposures</b>		
20	<b>Tier 1 capital</b>	<b>64,964</b>
21	<b>Total exposures</b> (sum of lines 3, 11, 16 and 19)	<b>1,260,620</b>
<b>Leverage ratios</b>		
22	<b>Basel III leverage ratio</b>	<b>5.15%</b>

## Risk-Weighted Assets

The following table provides a breakdown of credit risk exposures as of June 30, 2016. Average exposure is calculated by taking the average of the quarterly gross exposures for a 12-month period.

	<b>Gross exposure</b>	<b>Average exposure</b>	<b>RWA</b>	<b>Capital required</b>
Bank and sovereign	\$ 137,331	\$ 171,973	\$ 26,322	\$ 1,843
Retail residential mortgages	1,114,666	1,130,193	89,532	6,267
Other retail	166	1,201	-	-
Other assets	19,281	25,622	19,281	1,350
Total credit risk	1,271,444	1,328,989	135,135	9,460
Operational risk	-	-	61,038	4,273
Total risk-weighted assets	\$ 1,271,444	\$ 1,328,989	\$ 196,173	\$ 13,733

## Risk Management

### Credit Risk

Credit risk is the risk of loss resulting from the failure of a counterparty to honor its financial obligation. The Bank is exposed to credit risk through cash, restricted cash, amounts receivable, restricted investments, loans and derivative financial assets.

Credit risk management is a component of the Risk Management Framework (RMF) approved by the Board and the Audit and Risk Management Committee. The Assets and Liabilities Committee (ALCO) provides financial oversight over credit risk and ensures the Bank meets mortgage insurers' compliance standards. The ALCO reviews arrears and underwriting post assessment reporting, which is also communicated to the Audit and Risk Management Committee. Credit risk management over day to day operations is provided by the Credit Management Committee, including oversight of the geographic concentration. The lines of business are responsible for management of the Bank's credit risks in accordance with approved policies.

The Bank manages credit risk with respect to cash and restricted cash by holding currency with major Canadian banks. Restricted investments are invested in treasury bills, federal bonds and securities guaranteed by the Government of Canada. Securitized mortgages and residential mortgages are insured against credit losses, which reduce the Bank's credit risk, except for a portion of conventional uninsured mortgages in the total portfolio. Both types of mortgages are residential mortgages. Funded mortgages comply with the product and underwriting policies of the Bank and the mortgage insurers and property is held as collateral to mitigate the risk of loss. The Bank maintains provisions for potential credit losses.

The Bank is also exposed to credit risk through contracts with third parties for mortgage insurance and derivatives utilized to manage interest rate risk. This counterparty credit risk is mitigated by contracting with reputable organizations that have investment-grade credit ratings and by utilizing a number of different organizations, where possible, to minimize the impact of the risk of any one counterparty defaulting on its contractual obligations.

In the event of an economic downturn, the Bank is well-positioned to continue mortgage lending, provide security and mitigate increasing risk. Compliance with the Canadian regulatory system ensures that extremely high risk mortgages, such as sub-prime mortgages, are not made available and mortgages that pose a higher risk where the down payment is less than 20% of the mortgage loan are insured against losses. The Bank's mortgage default rate remains around 3.47%. Management closely monitors the default rate with increased scrutiny over those provinces more significantly impacted by the current economic conditions in Canada. Additionally, the Bank restricts future lending in areas where economic uncertainty increases its exposure to credit loss. The Bank continues to have strong relationships with Canada's principal insurers, CMHC and Genworth Financial.

**a) Impaired and past due loans**

The Bank maintains a provision for credit losses which, in management's opinion, is adequate to absorb all losses related to loans that have occurred as a result of one or more loss events, whether detected or not, including accrued interest. The provision for credit losses consists of specific provisions and a collective provision and the methodology and assumptions used for estimating each are reviewed on a regular basis.

There is objective evidence of impairment when one of the following conditions is met:

- the interest or principal repayment is contractually 90 days or more past due, unless the loan is fully secured or in the process of collection, or
- there is reason to believe that a portion of the principal or interest cannot be collected, such as financial difficulties of the borrower or national or local economic conditions that correlate with defaults on the assets in the portfolio.

Specific mortgage provisions are determined on an item-by-item basis when an impaired loan is determined to be individually significant. The specific provision represents the amount required to reduce the carrying value of an impaired loan to its estimated realizable amount, taking into consideration, if applicable, proceeds available from mortgage insurers and collateral held.

The following provides aging information for loans that are past due as of June 30, 2016:

	<b>Securitized mortgages</b>	<b>Residential mortgages</b>	<b>Total</b>
1-29 days	\$ 10,770	\$ 8,643	\$ 19,413
30-59 days	3,689	4,310	7,999
60-89 days	1,560	1,198	2,758
Over 90 days	4,785	10,125	14,910
	<b>\$ 20,804</b>	<b>\$ 24,276</b>	<b>\$ 45,080</b>

The following details the collective and specific provision for credit losses:

	<b>Collective</b>	<b>Specific</b>	<b>Total</b>
At December 31, 2015	\$ 3,445	\$ 1,746	\$ 5,191
Provision	510	467	977
Write-offs	(44)	(193)	(237)
At June 30, 2016	<u>\$ 3,911</u>	<u>\$ 2,020</u>	<u>\$ 5,931</u>

### b) Geographic breakdown

The following table provides a breakdown of loan balances as of June 30, 2016:

	<b>Securitized mortgages</b>	<b>Residential mortgages</b>	<b>Total</b>	<b>% of portfolio</b>
Alberta	\$ 219,603	\$ 136,936	\$ 356,539	32.04%
Ontario	186,149	160,376	346,525	31.14%
Atlantic provinces	138,390	65,014	203,404	18.28%
British Columbia	54,818	68,032	122,850	11.04%
Other	43,031	40,456	83,487	7.50%
	<u>\$ 641,991</u>	<u>\$ 470,814</u>	<u>\$ 1,112,805</u>	<u>100.00%</u>
As a % of portfolio	57.69%	42.31%	100.00%	

### c) Insured and uninsured portfolio

The Bank's total mortgage portfolio is represented by 79.62% or \$886 million in insured mortgages and 20.38% or \$227 million in uninsured mortgages. Insured or high-ratio mortgages are mortgages with less than 20% down payment on the lesser value of either the purchase price of a home or the appraised value. Below that threshold the Bank Act requires that mortgage default insurance must be obtained for a fee by a mortgage loan insurance provider. Uninsured or conventional mortgages are mortgage loans that do not exceed 80% of the lesser value of either the purchase price of a home or the appraised value. The following chart provides a breakdown of the mortgage portfolio by province by insured and uninsured as of June 30, 2016:

**d) Uninsured loan origination**

The average loan-to-value (LTV) of uninsured mortgages originated during the quarter ended June 30, 2016 was 73.9%. The following chart provides a breakdown on the average LTV by province of loans originated in the quarter ended June 30, 2016:

Province	Average LTV
Alberta	75.2%
British Columbia	70.3%
Ontario	74.7%
Other	72.7%

**e) Loan maturities**

The following table provides a breakdown of loan maturities as of June 30, 2016:

	Within 1 year	Over 1 to 3 years	Over 3 to 5 years	Over 5 years	Carrying value
Securitized mortgages	\$ 353,611	\$ 229,289	\$ 59,091	\$ -	\$ 641,991
Residential mortgages	192,869	203,869	70,985	3,091	470,814
Total	\$ 546,480	\$ 433,158	\$ 130,076	\$ 3,091	\$1,112,805

**Loan amortization**

The following chart provides a breakdown of mortgages outstanding based on original amortization as of June 30, 2016:

## Interest Rate Risk

Interest rate risk is the risk of loss from future changes in the prevailing level of interest rates. The Bank is exposed to interest rate risk as a result of a difference, or gap, between the maturity or repricing date of interest rate-sensitive assets and liabilities, as well as on unsold mortgage commitments. It uses two interest rate risk sensitivity models to measure the impact of changing interest rates on its equity position and net interest income for the 12 months following the measurement date. The objective is to measure the interest rate risk within Board approved guidelines.

Management incorporates expectations of future events where the maturity or repricing dates differ from contractual dates. Some contractual obligations, such as mortgages will be terminated prior to their maturity date through prepayments. The Bank incorporates these assumptions in the management of interest rate risk exposure.

The Bank's RMF includes interest rate risk management policies that are approved by the Board and the ALCO. The ALCO establishes and recommends to the Board interest rate risk tolerances, which the Board approves. The ALCO oversees stress testing of interest rate risk and the monitoring of risk mitigation strategies. The finance department is responsible for managing the Bank's interest rate risk positions in accordance with approved policies and assesses the impact of market events on the Bank's net interest income and equity at risk on an ongoing basis.

Based on the Bank's interest rate positions at June 30, 2016, an immediate and sustained change in interest rates would impact equity over the next 12 months, as follows:

Increase of 100 basis points	\$	(4,403)
Decrease of 100 basis points	\$	3,772

The Bank uses economic hedges to manage its interest rate risk, including synthetic bond shorts and interest rate swaps. The following table summarizes the synthetic bond shorts, the interest rate swap portfolio and the related credit risk at June 30, 2016. Notional amounts represent the amount to which a rate or price is applied in order to calculate the exchange of cash flows. Current replacement cost represents the cost of replacing all positive fair value contracts using current market rates. The credit risk equivalent represents the current replacement cost and the potential future credit exposure if the counterparty defaults. Potential future credit exposure is determined based on a formula prescribed by OSFI.

	<b>Notional amount</b>	<b>Current replacement cost</b>	<b>Credit risk equivalent</b>
Within 1 year	\$ 174,733	\$ 279	\$ 279
Over 1 to 5 years	50,000	-	250
	<u>\$ 224,733</u>	<u>\$ 279</u>	<u>\$ 529</u>

The risk-weighted balance for these derivative instruments, which represents the credit risk equivalent weighted according to the credit worthiness of the counterparty as prescribed by OSFI is \$1.

Cash deposits and restricted investments of \$5,486 are maintained with the counterparties as collateral based on the amount and position of securities outstanding. These amounts are restricted and not available for general use. The counterparties to the various derivatives can request additional collateral if the Bank increases its positions or if unrealized losses exceed agreed upon limits.

### **Liquidity Risk**

Liquidity risk is the risk that cash demands or funding obligations cannot be met as they come due. Liquidity risk also includes the risk of not being able to liquidate assets in a timely manner at a reasonable price. The Bank is exposed to liquidity risk due to the mismatching of the duration of assets, particularly the maturity of mortgages, and liabilities, particularly term deposits. The Bank is also exposed to liquidity risk to the extent that the Bank's unfunded mortgage, repurchase commitments outstanding and trade obligations committed but not yet paid exceed available cash or ability to raise deposits.

The Bank's RMF includes liquidity and funding policies that are approved by the Board and the ALCO. The ALCO establishes and recommends to the Board liquidity risk tolerances, which the Board approves. The Bank's policies address the minimum level of liquid assets, the composition of liquid assets, the stress tests to be completed and the frequency of assessments. The ALCO reviews the composition and terms of assets and liabilities, reviews liquidity and funding policies and regularly monitors compliance with these policies. The ALCO also oversees stress testing of liquidity and funding risk and the monitoring of the Bank's contingency funding plan. The finance department is responsible for managing the Bank's liquidity and funding positions in accordance with approved policies and assesses the impact of market events on liquidity requirements on an ongoing basis.

The Bank evaluates total liquid assets against funding requirements and stress test scenarios to ensure liquid assets are available to cover current needs and during periods of market stress. Quarterly, standard stress tests are performed in addition to scenarios dependent upon the risks existing at the time testing is performed. The results are reported to the ALCO and the Board. The Bank's liquid assets are made up of cash with large institutions, and unencumbered, high credit quality assets. The Bank's liquidity coverage is 17.6, which is within Board policy limits.

Liquidity is managed by selling or securitizing funded mortgages to investors and via the management of the amount and term of outstanding deposits. The Bank monitors its exposure to funding sources and sets limits to reduce the Bank's reliance on any one funding source. Investors include whole loan investors, mortgage-backed securities (MBS) investors and the Canadian Housing Trust (CHT) through the Canada Mortgage Bond program. As the Bank is not rated by a recognized credit agency, a rated intermediary is required to act on its behalf in dealings with the CHT. The Bank continues to maintain liquidity through issuing MBS, selling to whole loan investors, and raising deposits through deposit brokers. Although the Bank has deposits maturing within one year, liquidity is expected to be maintained through continued mortgage sales or securitizations, renewal of a portion of these deposits and raising new deposits.

The finance department prepares weekly three-month cash requirements forecasts (including lending commitments, mortgage sales and securitizations and deposits issuances and maturities) that are updated and monitored daily with regular review by the ALCO.

The Bank also manages its liquidity to comply with OSFI's Liquidity Adequacy Requirements (LAR). The LAR introduced liquidity measures, the liquidity coverage ratio (LCR) and the net cumulative cash flow (NCCF). The LCR is an OSFI mandated liquidity measure that requires the

Bank to maintain a sufficient stock of high-quality liquid assets to cover a minimum of 30 days of net cash outflows in a stressed environment. The OSFI-designed NCCF measures funding mismatches over and up to a 12-month time horizon.

## Remuneration

Key management personnel include executive management and board directors as these groups have the authority and responsibility for planning, directing and controlling the activities of the Bank. The Bank's compensation costs are:

	<b>Year ended 12/31/2015</b>	<b>Projected 12/31/2016</b>
Salaries	\$ 1,041	\$ 1,083
Short-term employee benefits	24	25
Post-employment benefits	81	84
	<u>\$ 1,146</u>	<u>\$ 1,192</u>

Variable compensation is negligible and is not based on performance objectives. Variable compensation to executive management is equivalent to the variable compensation offered to all staff. Board directors receive no other compensation apart from board of director fees.
