

SQL, ETL, .NET YOU speak MANY languages!

COMPUTING SCIENCE INTERNSHIP - JR. SYSTEMS ANALYST, BRIDGEWATER BANK, CALGARY

You've been passionate about technology and computers for as long as you can remember (even as a kid, you were the family's go-to tech whiz). To you, building, supporting and maintaining systems isn't work – it's your calling. You have a burning desire to seek out innovative business solutions that exceed your client's needs. You've got the skills to coordinate a project from start to finish; you work well with a broad group of people, and communicate clearly every step of the way.

Sounds like you? Then maybe it's time we talked.

What moves you

- You manage your time as expertly as you manage your projects. Prioritizing, planning and organizing are part of your DNA.
- You're a mad multi-tasker, able to juggle projects and deadlines with ease.
- You're take a multi-dimensional approach when seeking solutions to process and system-related issues; you're a unique mix of detail oriented and big picture thinker — and we like that about you.
- You don't need anyone to light a fire under you – when you see something that needs doing, you get on it!
- You love to squirrel yourself away with the data but also enjoy being a part of a collaborative team.
- You're not only comfortable with change – you embrace it.
- You have strong problem-solving and analytical skills, with a knack for understanding business priorities and aligning current objectives accordingly.

What you'll do

- Reporting to the Manager, IT Operations, you'll provide support and solutions for our helpdesk and various business issues, critical processes and applications.
- Develop processes related to data cleansing, data quality and data consolidation.
- Collaborate with all business units to obtain data and reporting requirements, manage and standardize all reporting, and test to ensure the accuracy of the data delivered.
- Automate data extracts and integration of data to reduce manual effort and provide a consistent ongoing data access capability.
- Make recommendations for reporting that would better meet business requirements.
- Analyze and document available data sources and data flows.
- Assist with management of regularly scheduled and ad-hoc reporting.
- Identify workflow inefficiencies across business units and provide recommendations.

What you've done

- You're enrolled in a post-secondary program. (Business Administration, Statistics, Computer Science).
- You know your way around Microsoft Office, specifically Excel, Visio, and PowerPoint.
- You're experienced in identifying and documenting business and functional requirements, business processes, workflow analysis and documentation.
- You're already familiar with multi-dimensional data modeling, predictive modeling, data architectures, and IT processes (ELT Tools and Report Development).
- Bonus points if you've worked with Microsoft.net.

If this is you, we want to see you. And you want to see us.
